                                   CC dilydroxy1nda, 1,2-dilydroxy-1,2,3,4-tetrahydronaphthalene, which CC involves contacting them with naphthalene, biphenyl, phenanthrene, CC involves contacting them with naphthalene, biphenyl, phenanthrene, CC indene, and 1,2-dilydronaphthalene respectively. The polypeptides and CC the host cells are also useful for preparing 1,2-dilydroxy-1,2-CC dilydroxy-1 contacting them with phenanthrene. The polypeptides and the lost cells are also used in bioremediation in which they oxidise an CC aromatic compound such as indene, 1,2-dilydronaphthalene, CC benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzofuran, CC acenaphthylene, naphthalene, biphenyl, fluorene, dibenzofuran, CC dibenzothiophene, 9,10-dilydroanthracene, or 9,10-dilydrophenanthrene a corresponding dilydro dilydroxy compound. The polypeptides and the host C cells are useful for preparing chiral diols for use in the polymer, CC resin, pharmaceutical or rubber industry. The present sequence represents anaphthalene dioxygenase (NDO) mutant alpha subunit, given in the corresponding dilydropenase (NDO) mutant alpha subunit, given in the corresponding dilydropenase (NDO) mutant alpha subunit, given in the corresponding dilydropenase (NDO) mutant alpha subunit, given in the corresponding dilydropenase (NDO) mutant alpha subunit, given in the corresponding dilydropenase (NDO) mutant alpha subunit, given in the corresponding dilydropenase (NDO) mutant alpha subunit, given in the corresponding dilydropenase (NDO) mutant alpha subunit, given in the corresponding dilydropenase (NDO) mutant alpha subunit, given in the corresponding dilydropenase (NDO) mutant alpha subunit, given in the corresponding dilydropenase (NDO) mutant alpha subunit, given in the corresponding dilydropenase (NDO) mutant alpha subunit, given in the corresponding dilydropenase (NDO) mutant alpha subunit, given in the corresponding dilydropenase (NDO) mutant alpha subunit, given in the corresponding dilydropenase (NDO) mutant alpha subunit, given in the corresponding dilydropenase (NDO) mu
                                                                                                                                                                                                                                                                                                                                                                                                                               alpha subunit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparing (-)-(15,2R)-cis-napththalene dihydrodiol, (- or +)-cis-biphenyl-3,4-dihydrodiol, (15,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-dihydrodiol, (15,2R)-cis-phenanthrene-1,2-dihydrodiol
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel naphthalene dioxygenase mutant having a specific substitution for preparing chiral diols for use in the pharmaceutical or rubber industry and for carrying out

                                                                                                                                                                                                                                    8
                                                                                                                                                                                                                                                                                                                                            cc related complex (I) comprising several polypeptides which contain an C alpha subunit that contains substituted amino acids at specific C positions. The polypeptides and host cells are useful for preparing C (-)-(15,2R)-cis-naphthalene dihydrodiol, (- or +)-cis-biphenyl-3,4-C dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which cinvolves contacting them with naphthalene, biphenyl, phenanthrene, C indene, and 1,2-dihydronaphthalene respectively. The polypeptides and C the host cells are also useful for preparing 1,2-dihydroxy-1,2-C dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which convolves contacting them with phenanthrene. The polypeptides and the convolves contacting them with phenanthrene. The polypeptides and the convolves contacting them with phenanthrene, which they oxidise an cc aromatic compound such as indene, 1,2-dihydrophenanthrene which convolves contacting them with phenanthrene, dibenzo(1,4)dioxan, C decaphthylene, naphthalene, phenanthrene, dibenzo(1,4)dioxan, C dibenzothyophene, 9,10-dihydropanthracene, dibenzo(1,4)dioxan, C dibenzothophene, 9,10-dihydroanthracene, or 9,10-dihydrophenanthrene a corresponding dihydro dihydroxy compound. The polypeptides and the host C cells are useful for preparing chiral diols for use in the polymer, C anaphthalene dioxygenase (NDO) mutant alpha subunit, given in the c exemplification of the present invention.
                                                                                                                                                                                                                                                                                         Query Match

The present invention describes a naphthalene dioxygenase (NDO) or NDO CC related complex (I) comprising several polypeptides which contain an CC alpha subunit that contains substituted amino acids at specific CC positions. The polypeptides and host cells are useful for preparing CC (-)-(15,2R)-cis-naphthalene dihydrodiol, (-or+)-cis-biphenyl-3,4-CC dihydroxyindan, 1,2-dihydroxyindan, 1,2-dihydroxyindan, 1,2-dihydroxyl-1,2,3,4-tetrahydronaphthalene, which CC involves contacting them with naphthalene, biphenyl, phenanthrene, CC indene, and 1,2-dihydronaphthalene respectively. The polypeptides and CC dihydrophenanthrene or 3,4-dihydroxy-1,2-1,2-dihydroxy-1,2-CC dihydroxy-1,2-dihydroxy-1,2-CC dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which convolves contacting them with phenanthrene. The polypeptides and the host cells are also used in bioremediation in which they oxidise an CC involves contacting them with phenanthrene. The polypeptides and the CC host cells are also used in bioremediation in which they oxidise an CC aromatic compound such as indene, 1,2-dihydronaphthalene, CC benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzo(1,4)dioxan, CC acenaphthylene, naphthalene, biphenyl, fluorene, dibenzofuran, CC dibenzothiophene, 9,10-dihydroxy compound. The polypeptides and the host CC corresponding dihydro dihydroxy compound. The polypeptides and the host
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel naphthalene dioxygenase mutant having a specific amino substitution for preparing chiral diols for use in the polyme pharmaceutical or rubber industry and for carrying out bioren

The present sequence represents naphthalene dioxygenase (NDO) from the Pseudomonas sp. strain NCIB 9816-4, which is used in the exemplification of the present invention.

The present invention describes a naphthalene dioxygenase (NDO) or NDO CC related complex (1) comprising several polypeptides which contain an CC alpha subunit that contains substituted amino acids at specific CC positions. The polypeptides and host cells are useful for preparing CC (1)-(15,2R)-cis-naphthalene dihydrodiol, (- or +)-cis-biphenyl-3,4-CC dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which cis-1,2-CC dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which clindene, and 1,2-dihydronaphthalene, perpendictly. The polypeptides and CC involves contacting them with naphthalene, biphenyl, phenanthrene which they dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydroxy-1,2-CC dihydroxy-1s are also used in bioremediation in which they oxidise and the const cells are also used in bioremediation in which they oxidise and CC involves contacting them with phenanthrene. The polypeptides and the const cells are also used in bioremediation in which they oxidise an caromatic compound such as indene, 1,2-dihydronaphthalene, compound such as indene, 1,2-dihydronaphthalene, compound such as indene, phenanthrene, dibenzo(1,4)dioxan, compound such as indene, phenanthrene, dibenzo(1,4)dioxan
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel naphthalene dioxygenase mutant having a specific amino acid substitution for preparing chiral diols for use in the polymer, resin pharmaceutical or rubber industry and for carrying out bioremediation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 2000-452174/39.

                                                                                QΥ
                                                                                                                                                                                                                        cc alpha subunit that contains substituted anino acids at specific corresponding that contains substituted anino acids at specific corresponding them with a polypeptides and host cells are useful for preparing cc (-)-(15,2R)-cis-napththalene dihydrodiol, (-or +)-cis-biphenyl-3,4-cc dihydrodiol, (15,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-c dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which cc dihydroxyindan, 1,2-dihydroxy-1,2-4-tetrahydronaphthalene, which cc indene, and 1,2-dihydronaphthalene respectively. The polypeptides and cc dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which cc dihydroys contacting them with phenanthrene. The polypeptides and the caromatic compound such as indene, 1,2-dihydronaphthalene, cc daromatic compound such as indene, 2,2-dihydronaphthalene, cc daromatic compound such as indene, 2,2-dihydrophenanthrene ac corresponding dihydro dihydroxy compound. The polypeptides and the host cells are useful for preparing chiral diols for use in the polymer, caresin, pharmaceutical or rubber industry. The present sequence represents cexamplification of the present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            180
```

The present invention describes a naphthalene dioxygenase (NDO) or N related complex (I) comprising several polypeptides which contain an alpha subunit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparing (-)-(1s,2R)-cis-napththalene dihydrodiol, (- or +)-cis-biphenyl-3,4-dihydrodiol, (1s,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-dihydrodyl, 1,2-dihydrodyl, 1,2-dihydroxylndan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which

Example

7; Page 144-145; 151pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     involves contacting them with naphthalene, biphenyl, phenanthrene, chindene, and 1,2-dihydronaphthalene respectively. The polypeptides and the host cells are also useful for preparing 1,2-dihydroxy-1,2-dihydroxy-thene or 3,4-dihydroxy-3,4-dihydroxy-1,2-cdihydroxy-thenenthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which involves contacting them with phenanthrene. The polypeptides and the host cells are also used in biperendiation in which they oxidise an aromatic compound such as indene, 1,2-dihydronaphthalene, benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzo(1,4)dioxan, acenaphthylene, naphthalene, biphenyl, fluorene, dibenzofuran, dibenzothiophene, 9,10-dihydroanthracene, or 9,10-dihydrophenanthrene a corresponding dihydro dihydroxy compound. The polypeptides and the host cells are useful for preparing chiral diols for use in the polymer, anaphthalene dioxygenase (NDO) mutant alpha subunit, given in the cement of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

dihydroxyindan, 1,2 dihydroxy-1,2,3,4-tetrahydronaphthalene, which convolves contacting them with naphthalene, biphenyl, phenanthrene, contacting them with naphthalene, biphenyl, phenanthrene, contacting them with naphthalene, long them yellowed the host cells are also useful for preparing 1,2-dihydroxy-1,2-convolves contacting them with phenanthrene. The polypeptides and the linvolves contacting them with phenanthrene. The polypeptides and the constructing them with phenanthrene. The polypeptides and the lost cells are also used in bioremediation in which they oxidise an constitution of the properties and the linvolves compound such as indene, 1,2-dihydronaphthalene, benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzofuran, consequence, naphthalene, biphenyl, fluorene, dibenzofuran, consequence, phenanthrene, dibenzofuran, conversional dihydro dihydroanthracene, or 9,10-dihydrophenanthrene a corresponding dihydro dihydroxy compound. The polypeptides and the host corresponding dihydro dihydroxy compound. The polypeptides and the host corresponding dihydro dihydroxy compound. The polypeptides and the host corresponding dihydro dihydroxy compound. The polypeptides and the host corresponding dihydro dihydroxy compound. The polypeptides and the host corresponding dihydro dihydroxy compound alois for use in the polymer, cresin, pharmaceutical or rubber industry. The presents sequence represents a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the corresponding dihydroxy compound in the polymer.

                                                  aromatic compound such as indene, 1,2-dihydronaphthalene, benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzo(1,4)dioxan, acenaphthylene, naphthalene, biphenyl, fluorene, dibenzo(1,4)dioxan, dibenzothophene, 9,10-dihydronathracene, or 9,10-dihydrophenanthrene a corresponding dihydro dihydroxy compound. The polypeptides and the host cells are useful for preparing chiral diols for use in the polymer, resin, pharmaceutical or rubber industry. The present sequence represent a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   related complex (I) comprising several polypeptides which contain an alpha subunit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparing (-)-(15.2R)-cis-napththalene dihydrodiol, (- or +)-cis-biphenyl-3,4-dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which
                                                                                                                                                                                                                                                                                                                                                         dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which involves contacting them with naphthalene, biphenyl, phenanthrene, indene, and 1,2-dihydronaphthalene respectively. The polypeptides and the host cells are also useful for preparing 1,2-dihydroxy-1,2-dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which involves contacting them with phenanthrene. The polypeptides and the host cells are also used in bioremediation in which they oxidise an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel naphthalene dioxygenase mutant having a specific amino acid substitution for preparing chiral diols for use in the polymer, resin, pharmaceutical or rubber industry and for carrying out bioremediation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a naphthalene dioxygenase (NDO) or NDO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 13; Page 104-105; 151pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           N-PSDB; AAA65343

```
cc related complex (I) comprising several polypeptides which contain an C alpha subunit that contains substituted amino acids at specific CC positions. The polypeptides and host cells are useful for preparing CC (-)-(15,2R)-cis-naphthalene dihydrodiol, (- or +)-cis-biphenyl-3,4-CC dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which CC involves contacting them with naphthalene, biphenyl, phenanthrene, CC indene, and 1,2-dihydroxphthalene respectively. The polypeptides and CC the host cells are also useful for preparing 1,2-dihydroxy-1,2-CC dihydroxphenanthrene or 3,4-dihydroxy-3,4-dihydroxphenanthrene which CC host cells are also used in bioremediation in which they oxidise an CC aromatic compound such as indene, 1,2-dihydronaphthalene, CC benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzo(1,4)dioxan, CC dibenzothiophene, 9,10-dihydroxanthracene, dibenzo(1,4)dioxan, CC dibenzothiophene, 9,10-dihydroxanthracene, dibenzofuran, CC dibenzothiophene, 9,10-dihydroxanthracene, dibenzofuran, CC corresponding dihydro dihydroxy compound. The polypeptides and the host CC cells are useful for preparing chiral diols for use in the polymer, CC anaphthalene dioxygenase (NDO) mutant alpha subunit, given in the CC a maphthalene dioxygenase (NDO) mutant alpha subunit, given in the
                                                                                                                                                                                                                                           Query Match

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
